

IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~striketrough~~. When strikethrough cannot easily be perceived, or when five or fewer characters are deleted, [[double brackets]] are used to show the deletion. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please AMEND claim 22, 23, 25, and 26, and CANCEL claims 9, 11, 16 and 24 without prejudice or disclaimer in accordance with the following:

1-21. (canceled)

22. (currently amended) The goods purchase information processing system according to claim ~~9~~25 wherein said mobile terminal transfers the goods purchase information from the memory into a household budget system of said processing device of said user.

23. (currently amended) The goods purchase information processing system according to claim ~~11~~26, wherein said mobile terminal transfers the goods purchase information from the memory into a household budget system of said processing device of said user.

24. (canceled)

25. (currently amended) A goods purchase information processing system in a store, comprising:

a mobile terminal having a first communication unit, a controller and a memory and being held by a user;

a reader reading goods information for goods purchased by a said user of said mobile terminal; and

a register terminal comprises:

a second communication unit for communicating with said mobile terminal;

a third communication unit for communicating with said reader; and

a controller connected to said second and third communication units and calculating goods settlement information from said read goods information through said third communication unit and processing the settlement in response to a prompt from a settlement key in accordance with authorization of said user,

wherein said ~~register terminal controller~~ sends said goods settlement information to said

mobile terminal in response to a prompt from the settlement key of said goods settlement information through said second communication unit, and the mobile terminal temporarily stores the goods purchase information in said memory.

26. (currently amended) A goods purchase information processing system, comprising:
a mobile terminal having a first communication unit, a controller and a memory and being held by a user;

a reader reading the goods information for the goods purchased by said user; and
a register terminal provided separately to said reader and calculating the goods settlement information from said read goods information and processing the settlement,
wherein said reader comprises:

a second communication unit for communicating with said mobile terminal; and
a third communication unit for communicating with said register terminal,
and wherein said reader sends a send enable signal to said mobile terminal when said reader reads a barcode of said goods, receives a receive signal from said mobile terminal according to said send enable signal through said second communication unit, requests said goods purchase information to said register terminal in response to said received request, receives said goods purchase information from said register terminal through said third communication unit, and sends said received goods purchase information to said mobile terminal through said second communication unit, and the mobile terminal temporarily stores the goods purchase information in a memory.
